

RECYCLING

You'll have a part that's as good as new in no time at all.

New from old...

Are your rollers/cylinders worn out, damaged or do they no longer function?

Then you've come to the right place!

You'll have a part that's as good as new in no time at all. You save the core material and, as a result, costs. With recycling, you act in the interest of reduced environmental impact.

1. Removal of the old coating

2. Preparation of the core surface (adhesion preparation)

3. New coating

4. Grinding according to drawings or specifications

We would be glad to provide further assistance – so your roller runs smoothly again!
